

Bronchial brachytherapy

Patient Information Series PI 23a

East and North Hertfordshire 
NHS Trust

Consent

It is a legal requirement to have a signed Consent Form from you before the start of your treatment.

If you have already been given one of these forms, please bring the completed form with you when you come for your first appointment.

If you have not been given a form, this will be discussed with you at your first appointment.

Pregnancy/fathering a child

Female patients must not be pregnant or become pregnant and male patients must not father a child during a course of radiotherapy or for some months afterwards. **Please discuss this with your cancer specialist.**

If you think there is a chance, however small, of you or your partner being pregnant during treatment, it is very important that you discuss this with your oncologist, radiographer or nurse as soon as possible.

Female Patients will be asked to confirm their pregnancy status prior to radiotherapy. This applies to all women between the ages of 12 - 55 years. This is a legal requirement.

Identification

Please note that it is a legal requirement for the staff to check your name and details against your treatment sheet and your hospital name band each time you attend. You must wear your name band at all times whilst in hospital.

A patient's guide to bronchial brachytherapy at Mount Vernon Cancer Centre

This leaflet has been produced by professionals, patients and carers from Mount Vernon Cancer Centre who have expertise and experience in the topics covered by this publication. All our publications are reviewed and updated regularly. Details of the references used to write this information are available from the Information Team at the Lynda Jackson Macmillan Centre.

Introduction

This leaflet explains what happens when you have brachytherapy for bronchial tumours. It is a guide to help you understand more about this type of treatment and the procedure involved.

The cancer specialist is in charge of your care, and during this leaflet, we will refer to him/her as the oncologist.

¹The oncologist in charge of the brachytherapy will see you some time before your treatment, and explain the procedure to you.

You will also have the chance to discuss your treatment beforehand with the brachytherapy staff. If you wish you can see the room where the treatment is given.

You could be seen by both male and/or female radiographers when you have your treatment.

What is brachytherapy?

Brachytherapy is a form of radiotherapy given by directly introducing a radiation source into the part of your body we want to treat. The brachytherapy machine uses a small radioactive source which produces gamma rays.

What does the treatment involve?

Usually it will be necessary to admit you to hospital for your treatment, as you will require a general anaesthetic to enable a small tube to be passed into your bronchus while you are asleep.

¹ During this leaflet the term 'oncologist' will refer to both your cancer specialist (oncologist) and any doctors working within his/her team.

You will probably be asked to come to hospital the day before the treatment. This is to carry out routine tests to make sure that you can be given an anaesthetic safely.

- You will not be allowed anything to eat or drink from 12 midnight on the night before the anaesthetic.
- This procedure will take about 1½ hours but the treatment itself will take only about 10 - 25 minutes.
- The anaesthetic will be given to you in theatre. When you wake from the anaesthetic you will be aware of a fine tube coming out of your nose.
- Once you have recovered from the anaesthetic you will be taken on a trolley to the CT Scanner. This is where the brachytherapy radiographer will take a CT scan to check that the tube is in the right position.
- Then you will be taken to the brachytherapy treatment room. This is where the free end of the tube from your chest will be connected to the treatment machine while you are still lying on the trolley.
The radioactive source used for the treatment travels along this tube by remote control.
- The staff will leave the room while the treatment is in progress. However, they will be watching you on a TV screen in the control area nearby, and will also be able to talk to you via an intercom.
- As each patient is different, your treatment is worked out especially for you. The actual treatment time will therefore vary, but will usually last between 10 and 25 minutes.
- At the end of your treatment the radioactive source is withdrawn back into the machine by remote control.

- The staff will then come back into the room to you. The tube is removed after the treatment. This is completely painless, and you will be taken back to the ward.

You may be allowed home the same day, but the oncologist will advise you at the time. However, we strongly advise you to have a responsible adult to go home with you.

Are there any side-effects?

It is unusual for patients to experience any major side-effects after this treatment. However, you may have some increased coughing for a few days after treatment and sometimes a mild sore throat.

If you have already had a course of radiotherapy before brachytherapy, you may experience effects from both of the treatments - such as a slight sore throat or some discomfort while swallowing. These side-effects usually resolve on their own within a week or so.

We hope you find this information helpful. However, the brachytherapy staff will always do their best to answer any further questions you have about this treatment.

Additional support

People who have had cancer often say that during their illness they experienced a range of emotions, expected and unexpected. Many find it to be a stressful, anxious and confusing time, both as individuals and within relationships.

Some patients find it harder to make decisions or to face up to things, feeling overwhelmed and unable to focus on positive aspects within their lives.

If you have difficulty making sense of your feelings or can relate to any of these experiences, you may find talking it through with a trained counsellor / psychologist helpful.

Counselling aims to provide individuals and families with an opportunity to understand these new experiences in a way that can help them feel more manageable.

The Lynda Jackson Macmillan Centre (based at Mount Vernon Hospital) provides counselling and also a range of services including relaxation sessions and complimentary therapies.

The centre also produces a series of helpful hints on various topics including side-effects of radiotherapy. To find out more, either drop in or call the centre on the number on the back of this leaflet.

support & information at Mount Vernon Cancer Centre

... supporting people affected by cancer...

This leaflet forms part of a series of publications produced by the Lynda Jackson Macmillan Centre (LJMC).

If you would like further information about any aspect of cancer and its treatments, please drop in to the centre or call the Helpline.

The LJMC is staffed by healthcare professionals and trained volunteers and is part of the Mount Vernon Cancer Centre.

Services offered at the LJMC include:

- Drop-in centre for support and information
- Telephone helpline
- Benefits advice*
- Complementary therapies*
- Relaxation classes
- Counselling*
- Look Good...Feel Better™ beauty workshops
- Self-help courses

* These services are available to NHS patients under the care of an oncologist based at Mount Vernon Cancer Centre.

The **Lynda Jackson Macmillan Centre** is situated between the Cancer Centre and Gate 3 (White Hill)

Opening hours: **Mon-Fri: 9.30am-1.00pm & 2.00-4.30pm**

Mount Vernon Cancer Centre, Northwood, Middlesex HA6 2RN

Telephone Helpline: **020 3826 2555**
